- CCTV
- Gantries
- VMS
- Fibre optic cable
- WTOC and NZTA integration

John Wilkinson and I had a great adventure to Europe earlier in the year to attend the Intertraffic tradeshow. We also took the time to visit some of our key supply partners in Europe and visit their factories and R&D facilities. The next few years are going to bring some very exciting changes to our industry in terms of what can be achieved by improving detection technologies and how those interact with AI models to improve efficiency in our transport networks. Of course, the big issue with John's GUNS AI images earlier is that the Traffic Engineer enforcement agents looked more human than t-800

There are some really exciting things that we are working on with our clients here in Wellington around new technologies, but without stealing their thunder, I shall say nothing here. But if you want to catch up with me during one of the breaks, definitely happy to discuss what we are up to.

Spring cleaning and maintenance.
Ensuring that we are meeting all of our clients' needs is always our top priority
Exciting news that Downer are currently in negotiation with QLDC for the RCM which includes signals.

Questions?

Thank you
