Traffica’s long term vision is rooted in the belief that we play an important role in providing sustainable, innovative, and lasting solutions for all stakeholders.”
BASHIR AHMED – MANAGING DIRECTOR

WHY **TRAFFICA**

LARGE TEAM OF EXPERTS

We want you to focus on what you do best, while we do the same - and for us, that's organising the machinery needed for a successful construction.

EXTENSIVE EXPERIENCE

We are key players in the civil construction game - long enough to know a thing or three about safety upgrades, traffic signals, streetlighting, and sub-division projects.

COMMITMENT TO BROADER OUTCOMES

From Traffic Management to local land development, asphalt services and more, we proudly partner with local governments and commercial project managers on a wide range of projects.

Traffica skills lie in incorporating civils and ITS interfaces to run in tandem, smoothly with a seamless integration.

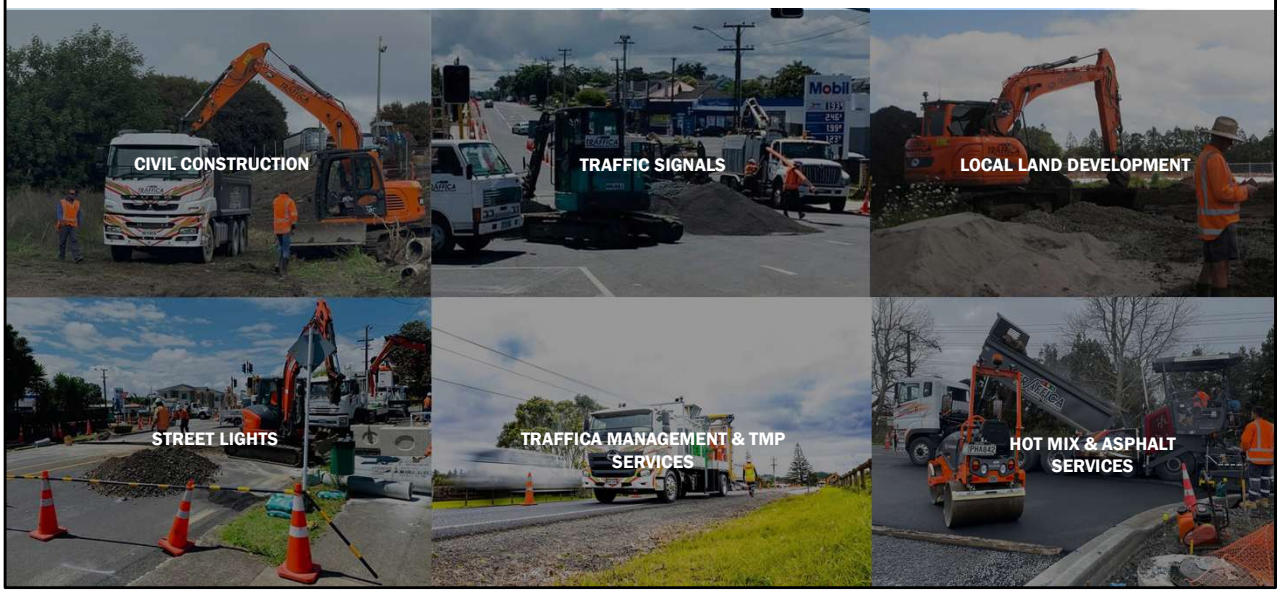

We complete all works in house from start to finish. Planning, programming, TTM, excavation, Signals, CCTV, civils works, street lighting and asphalt works.

With a multiple lead project managers who can manage and coordinate all required works all the way from initiation to when the lights start flashing Red, Amber and Green. Full build intersections and larger scale projects are managed in house.

On site crews have extensive experience to complete works in multiple work streams meaning we do not need specialist crews to be subcontracted or engaged to aid with the completion of construction works.

Quality is of the highest importance with HSE.

WHAT **WE DO**

CIVIL CONSTRUCTION
TRAFFIC SIGNALS
LOCAL LAND DEVELOPMENT
STREET LIGHTS
TRAFFICA MANAGEMENT & TMP SERVICES
HOT MIX & ASPHALT SERVICES

TRAFFIC SIGNALS & STREETLIGHTING

- 2 x Traffic Signal Maintenance Contracts
- 1 x Street Light Maintenance Contract

AGD – Above ground detection

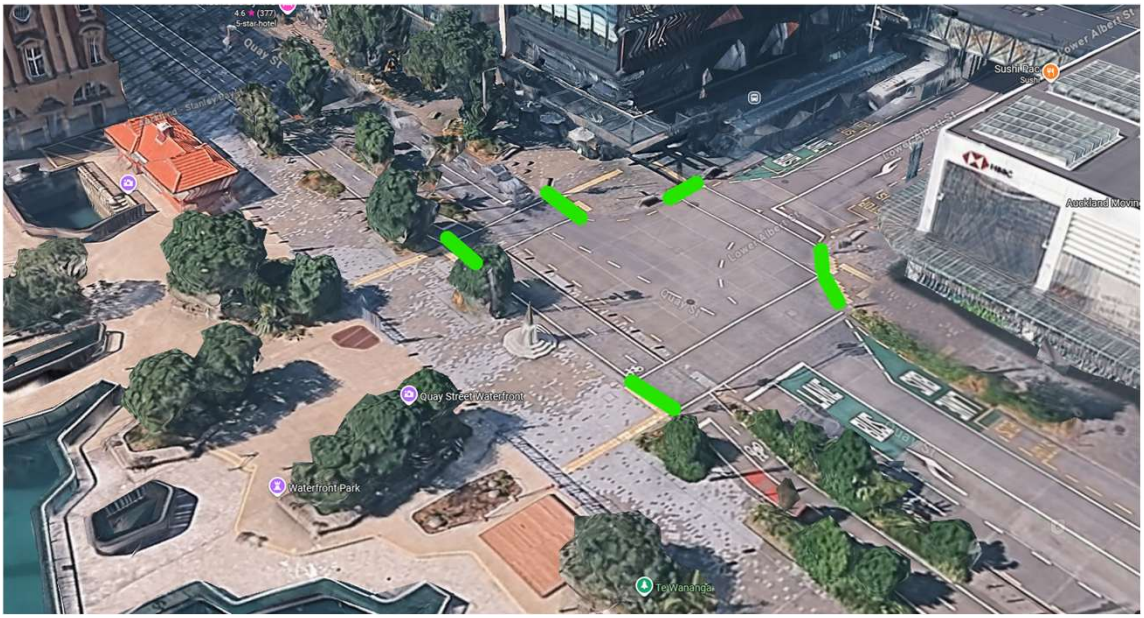

Auckland is full of AGDs but updating and improving the software to account for better delineation.

Pedestrians are the forefront of this along with a strong sense of optimising the network.

We have engaged with a AT TEPS panel consultancy to make this operational. We should have a prototype software in the next 6 months to test and trial.

This ties into what John said yesterday and may be Hamilton is the good place to trial this out – John we'll reach out to you later.

NEW INNOVATIONS

THANK YOU
