

SNUG 2022 Workshop P43 Updates

Jeff Greenough

Previously Discussed

- CIS and Personality commissioning
- SAT on Existing sites
- Electrical check sheet
- Street light integration into controllers
- ELV systems

Others

- Additional pole designs / pole amendments
- Anything from the floor

Previously Discussed

CIS and Personality Commissioning

- Discussed earlier – Thoughts

SAT on Existing sites

- Discussed earlier – Thoughts

Electrical check sheet

- Discussed earlier – Thoughts

Street light integration into controllers

- Discussed earlier – Thoughts

ELV Systems

- Discussed by Steen on day one.
- Do we feel that it is mature enough to include in entirety in P43 or just a section requiring RCA approval and details to how that would need to be progressed.
- May need RCA's to tag in or out in the regional special conditions.

New topics

Pole Diagrams Review

- There seems to be confusion as to whether these are too prescriptive and preclude alternative designs.
- Are there any additional pole requirements such as a shorter pole to be included for use when there is just a pedestrian aspect mounted. It is noted that there is also not a standard stub pole.

Anything from the floor

- Is P43 meeting the requirements, could it be better.
- Is there anything that members feel needs to be amended / removed.
- Anything that the committee should investigate for inclusion into P43.
- Does anyone need assistance writing Regional Specifications.
- Are all Regional Specifications up to date on the web site.

CIS and Personality commissioning

SAT on Existing sites

Electrical check sheet

Street light integration into controllers

ELV systems

Additional pole designs / pole
amendments

Anything from the floor

Challenging today.
Reinventing tomorrow.
